

INTERMEDIATE WEB DESIGN

assignment 8

RSS FEED READER

Create an Ajax-based RSS feed reader. I will supply an HTML file which includes the following fields: source (pull-down), how many items to show (radio button), and a checkbox for whether to display the RSS summaries. I will also supply three RSS feeds from the *New York Times*' website. Additional notes:

- » The article titles should be linked to the corresponding webpages.
- » Please read the comments in the HTML file; the comments contains additional details and instructions, including some starter code.
- » All JavaScript should be written inside of the HTML file - no need to store it in an external JavaScript file.

Deliverable: One (1) HTML webpage. Please include the folder containing the three RSS feeds.

OBJECTIVE

The purpose of this assignment is to practice using jQuery's Ajax methods.

DEADLINE

This assignment is due at the beginning of the next class. Please publish your files, including the folder containing the three RSS feeds, to your GitHub homework repository in a subfolder called "08 assignment."

WEIGHT

This assignment carries a weight of 0.75.
